

DECONTAMINATION GLOVE

“Fuller’s earth” Chemical

DECONTAMINATION GLOVE

“Fuller’s earth” Chemical

USE

Decontaminates persisting liquid toxic agents on the skin or equipment, with an absorbent Fuller’s earth powder.

One side containing the reservoir and the other is a wiping side.

A clip/tie secures the glove to the wrist.

The powder is then spread and tapped on. It absorbs the toxic liquid and wiped up using the sponged side.

The powder has been calculated to decontaminate several spots.

For military and Civil Defence forces use.

FEATURES

One side containing the reservoir and the other is a wiping side.

The other side is covered with spongy cloth, for wiping up.

Weight of glove: 127g

Decontamination glove is packed in (120x200x20 mm) liquid toxic agents and water proof bag which includes instructions for use.

Fuller’s earth: Actapulgit (highly absorbent superfine clay)
