

Serstech Capillary Probe

Simplicity. Speed. Precision.

Capillary Probe

Precision Analysis for Liquid Droplets

The Serstech Capillary Probe is a disposable, snap-on accessory designed for use with the Arx MkII, enabling precise and safe analysis of liquid spills down to 10 μ L. Traditional methods of analyzing liquid directly on the ground can lead to inaccurate results due to surface interference, while larger spills pose potential hazards. The Capillary Probe overcomes these challenges by ensuring reliable sampling in a controlled manner.

Key Benefits

- Quick and secure attachment with a snap-on.
- Reduces interference from underlying materials for reliable readings.
- Analysis of micro-level volumes. (10 μ L)
- Designed to be detachable with tactical gloves.
